

CardFocus from Sabadille Systems is a suite of powerful integrated base station software packages for the production of image cards for identification and security.

Microsoft Windows based
CardFocus provides an advanced yet simple to work with user interface for maximum end-user convenience in the card production process.

Rapidly create and store any number of card designs using a single-screen point-and-click WYSIWYG card designer.

With CardFocus You Can

- Link your cards to a range of different back-end Windows and Unix databases to see your cards populated with your data.
- Easily capture live images from cameras or static images from scanners and files for storage in your database and for printing on your cards.
- Using your existing network, enable multiple operators to work simultaneously with the same database to enter data and print cards.
- Use in-built barcode and magnetic stripe encoding modules to issue your cards with security features that can be read using standard barcode and magnetic stripe readers.
- Advance into the modern world of biometric security by capturing signatures and fingerprints. Authenticate captured fingerprints using the CardFocus fingerprint tool.
- Select from four different Windows-based editions in the CardFocus suite of products so as to best meet your requirements. Check out CardFocus Free Lite, CardFocus Express, CardFocus Professional and CardFocus VisitorBook.

CardFocus is the ideal solution for student cards, loyalty cards, membership cards, visitor passes and many more applications.
